

# SABER NEXUS SUITE

## Device & Key Management System

*On-premises control and management of keys, devices, and firmware.*

The Saber Nexus Suite is a key and device management system and central platform for managing encryption keys, and devices used by the E-Clip, E-Dock series, and the Saber Track. It enables users to securely load, change, and store encryption keys while maintaining on-premises full control. The platform also decrypts secure PLI (Position Location Information) data and delivers it directly to your chosen Common Operating Picture (COP) for seamless, secure situational awareness.

# Saber Nexus Suite Features

## Full User Control

- **On-premises** solution
- No third-party oversight or access
- Complete control over key groups creation, and updates.

## Advanced Key Group Management

- Generate AES-256 key
- Create and edit key groups instantly and easy.
- Assign devices to key groups in seconds.
- Configure advanced features per device such as setting the tracking intervals, disabling the LEDs, etc.

## Easy-Look Up

- Locate devices quickly by serial number or assigned key group or IMEI for easy management of the devices.

## Automatic Device Detection

- Automatically detects firmware version and device serial number upon connection.

## Secure Firmware updates and Key Upload

- Direct USB-C connection for secure updates and key uploads.

## Multi-level Admin Access

- Super-Admin has full system oversight and configuration access.
- Key Managers provision the devices by assignment them to key groups.

## Flexible Key Input Options

- Enter your own encryption key manually, OR use the built-in Random Key Generator for secure and instant key creation

## Flexible Integration with many COP Systems

- Configurable API to communicate with different COP (Common Operating Picture) systems whether you are using WinTAK or other systems.

## About Us

Black Saber Group (BSG), headquartered in Tampa, Florida, is a reseller of Iridium services and products and manufactures new devices that use the Iridium Satellite Network. Our personnel have decades of experience working with the U.S. Government, Non-Government Organizations (NGOs), Small to Large Industries, and Foreign Governments in identifying solutions for requirements.

# Saber Nexus Suite Devices

## The E-Clip

The E-Clip is an encryption device which attaches to the bottom of the **Iridium Extreme 9575**. The E-Clip is designed to enhance secure communication and tracking for the Iridium Extreme® satellite phone by providing **user-managed AES-256 encryption and tracking**.

## The E-Dock

The E-Dock is an encryption device which the **Iridium Extreme 9575** can be inserted to. The E-Dock is designed to enhance secure communication for the Iridium Extreme® satellite phone by providing user-managed AES-256 that features an external antenna.

## Saber Track

Saber Track is resilient PNT and tracking device built for GNSS-degraded, denied, or spoofed environments that securely delivers position updates to your designated endpoint. By combining GNSS, cellular (LTE), and GNSS backed with Iridium's PNT STL (Satellite, Time, and Location) Saber Track mitigates the effects of jamming, spoofing, and outages.
